

Getting Started 1.4.0

Accengage SDK allows you to track the execution and display of In-App and to handle Push notifications of your application.

This Phonegap/Cordova documentation explains the various methods available and how to use them.

In order to understand more deeply the features of the SDK, please refer also to the [User Guide](#), as well as native [iOS](#) and [Android](#) documents.

Changelog

The full changelog is available here : [Changelog Cordova](#)

Download
